

The fastest, most hygienic hands-in hand dryer

Less than 10 seconds drying time, HEPA filtered air, Low noise, Low energy

Less than 10 seconds drying time
Triclone operates using 2 motors to draw air through its **HEPA-13** filters directing air out of its 4 sets of **triple-blade apertures** placed at either side of each hand (12 blades in total). The emitted air is travelling at **213mph** which wipes the water from your hands, drying them in **under 10 seconds** - there is no other faster hands-in hand dryer

Hygienically HEPA filtered air
Aertek Triclone uses hospital-grade HEPA13 filters to remove **99.97%** of all airborne particles of dust, microbes, **bacteria and viruses** from the air before it reaches your hands.

This means the air you are drying your hands with is cleaner than the air you are breathing.

Low Noise Hand Drying
Noise bafflers and enclosed motors ensures the Aertek Triclone dries your hands with the minimal disruption.

At just 70dB, it is one of the **quietest hand dryers** available in the hands-in hand dryer category.

Triclone's nearest competitor, Dyson Airblade, is 85db (10 times louder!)

The fastest, most hygienic hands-in hand dryer

Low Energy Hand Drying

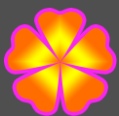

Aertek Triclone's **twin motor** system generates high speed air on both sides of each hand drawing heat from both motors and warming the air further using friction at the apertures. This means there is **no heating element** wasting energy and combining this with the lowest drying time of any hand dryer on the market, the **Green Rating of 3.9** places it firmly in the **Low Energy Hand Dryer** category.

Robust, industry-leading warranty

The Aertek Triclone hand dryer has the **strongest warranty** on the hand dryer market. At **7 years**, it makes a statement that this hand dryer will be on the wall for many years to come. **Manufactured in Europe** with exceptional aftercare service, the 1st year warranty is parts and labour included with a further 6 years parts supply or replacement.

Not just clean air, but freshly fragranced too

Triclone uses **Osmogen™ fragrance pods** which are inserted into the dryer to release a natural **odour eliminating** fragrance to amplify the user experience. With Osmogen™, Triclone does not suffer from stale odours associated with some other hands-in hand dryers.

Smart, anti-microbial water collection reservoir

Most hands-in hand dryers collect water in a tank underneath the unit. Aertek Triclone uses **antimicrobial technology** to ensure there is no bacterial build-up within the reservoir, unlike some others.

There is no need to buy a separate drip tray to prevent water ending up on the floor.

Tough, anti-vandal casing

Triclone's cover is a **vandal-resistant**, 2.6mm thick, impact-tested ABS plastic (the same material riot shields are made from).

Its lacquer coat prevents colour degradation, cracking and abrasion. Triclone has been tested to resist the rigours of a real-life washroom.

Drying Time Less than 10s	Warranty 7 Years	Noise Level 70dB
Air Filtration HEPA 13	Antibacterial Microban	Air Speed 211mph
Voltage 50/60Hz 220-240V	Power 1760w	IP Rating Class II IP21
Width 300mm	Height 661mm	Depth 195mm
Weight 9.5kg	Motor Speed 30000rpm	Standby Power Less than 0.7W
